

DILUTION CONTROL SOLUTIONS: SINGLE & MULTI PRODUCT DISPENSING

Blend Center dispensers are heavy duty, simple to use, and extremely effective dispensers designed for nearly any dilution control requirement. Based on the 633 water valve, which has set the standard for excellence in water valve design, Blend Center is available in multiple configurations. The compact and modular design of these dispensers allows for quick installation and fast maintenance when needed. With push button activation and an optional lock-on feature for longer fill times, the Blend Center reduces the amount of training required when compared to other dilution control dispensers.

Available in three styles, the 633 Blend Center is a single product dispenser that can be connected to other units. The 681P dispensers are available in 2 and 3 button configurations under a plastic cover, and the 681 stainless series are available in 1-5 products and housed in a stainless steel enclosure. All feature the reliable and industry standard 633 water valve.

Features & Benefits

- Durable plastic or stainless steel housing
- Available with 1, 2.5, and 4gpm (4, 9, 15lpm) flow rates
- Optional lock-on feature for longer fill times
